NATIONAL BUREAU OF STANDARDS

The National Bureau of Standards[1] was established by an act of Congress March 3, 1901. The Bureau's overall goal is to strengthen and advance the Nation's science and technology and facilitate their effective application for public benefit. To this end, the Bureau conducts research and provides: (1) a basis for the Nation's physical measurement system, (2) scientific and technological services for industry and government, (3) a technical basis for equity in trade, and (4) technical services to promote public safety. The Bureau consists of the Institute for Basic Standards, the Institute for Materials Research, the Institute for Applied Technology, the Institute for Computer Sciences and Technology, the Office for Information Programs, and the Office of Experimental Technology Incentives Program.

THE INSTITUTE FOR BASIC STANDARDS provides the central basis within the United States of a complete and consistent system of physical measurement; coordinates that system with measurement systems of other nations; and furnishes essential services leading to accurate and uniform physical measurements throughout the Nation's scientific community, industry, and commerce. The Institute consists of the Office of Measurement Services, and the following center and divisions:

Applied Mathematics — Electricity — Mechanics — Heat — Optical Physics — Center for Radiation Research — Laboratory Astrophysics[2] — Cryogenics[2] — Electromagnetics[2] — Time and Frequency[2].

THE INSTITUTE FOR MATERIALS RESEARCH conducts materials research leading to improved methods of measurement, standards, and data on the properties of well-characterized materials needed by industry, commerce, educational institutions, and Government; provides advisory and research services to other Government agencies; and develops, produces, and distributes standard reference materials. The Institute consists of the Office of Standard Reference Materials, the Office of Air and Water Measurement, and the following divisions:

Analytical Chemistry — Polymers — Metallurgy — Inorganic Materials — Reactor Radiation — Physical Chemistry.

THE INSTITUTE FOR APPLIED TECHNOLOGY provides technical services developing and promoting the use of available technology; cooperates with public and private organizations in developing technological standards, codes, and test methods; and provides technical advice services, and information to Government agencies and the public. The Institute consists of the following divisions and centers:

Standards Application and Analysis — Electronic Technology — Center for Consumer Product Technology: Product Systems Analysis; Product Engineering — Center for Building Technology: Structures, Materials, and Safety; Building Environment; Technical Evaluation and Application — Center for Fire Research: Fire Science; Fire Safety Engineering.

THE INSTITUTE FOR COMPUTER SCIENCES AND TECHNOLOGY conducts research and provides technical services designed to aid Government agencies in improving cost effectiveness in the conduct of their programs through the selection, acquisition, and effective utilization of automatic data processing equipment; and serves as the principal focus wthin the executive branch for the development of Federal standards for automatic data processing equipment, techniques, and computer languages. The Institute consist of the following divisions:

Computer Services — Systems and Software — Computer Systems Engineering — Information Technology.

THE OFFICE OF EXPERIMENTAL TECHNOLOGY INCENTIVES PROGRAM seeks to affect public policy and process to facilitate technological change in the private sector by examining and experimenting with Government policies and practices in order to identify and remove Government-related barriers and to correct inherent market imperfections that impede the innovation process.

THE OFFICE FOR INFORMATION PROGRAMS promotes optimum dissemination and accessibility of scientific information generated within NBS; promotes the development of the National Standard Reference Data System and a system of information analysis centers dealing with the broader aspects of the National Measurement System; provides appropriate services to ensure that the NBS staff has optimum accessibility to the scientific information of the world. The Office consists of the following organizational units:

Office of Standard Reference Data — Office of Information Activities — Office of Technical Publications — Library — Office of International Standards — Office of International Relations.

Tabulation of Voluntary Standards and Certification Programs for Consumer Products

William J. Slattery

This tabulation is a revised and enlarged version of NBS Technical Note 762, "Tabulation of Voluntary Standards and Certification Programs for Consumer Products," issued March 1973.

The original draft of the tabulation was developed by the Consumer Council of the American National Standards Institute (ANSI) in 1970. The product categories covered in the ANSI tabulation were based on those listed in the Consumer Product Safety Index (CPSI) of the National Commission on Product Safety, issued in July 1970. In 1971, at the Consumer Council's request, the Bureau's Office of Engineering and Information Processing Standards revised the draft tabulation and issued it as NBS Technical Note 705. In March 1973, the tabulation was again revised based on the product categories developed for the National Electronic Injury Surveillance System (NEISS) of the Food and Drug Administration. The NEISS listings used in Technical Note 762 were an expansion and revision of the CPSI. The product categories in the current revision are based on the NEISS Coding Manual published by the Consumer Product Safety Commission in July 1975.

The tabulation lists over 1000 product areas and over 2000 standards titles covering products found in and around the home. (The major consumer product areas not included are foods, beverages, and drugs.) The tabulation also indicates the applicable voluntary national, industrial, and international standards which deal primarily with either safety or performance or both aspects of the products listed. For some of the product areas, there are no applicable standards. Available information on certification programs and standards under development, and the Standard Industrial Classification (SIC) numbers for the products are also provided.

Key words: Certification programs; consumer products; household products; industry standards; international recommendations; national standards; product standards; recommended practices; specifications; test methods.

1. Introduction

This tabulation is a revised and enlarged version of NBS Technical Note 762, "Tabulation of Voluntary Standards and Certification Programs for Consumer Products," issued March 1973.

The product categories used in the current revision are taken from the NEISS Coding Manual of the Consumer Product Safety Commission, issued in July 1975. The NEISS listings are an expansion and revision of the categories established by the Food and Drug Administration. The omitted product numbers of the tabulation are 1293 and 1727.

Although its principal objective is to indicate existing standards and certification programs for consumer products found in and around the home, this revision also includes available listed products, and a listing of the standards titles.

For the purpose of this tabulation the word "standards" encompasses specifications, recommended practices, analyses, and selected test methods for products or certain aspects of the products, but does not include those standards related to installation, maintenance, definitions, or parts of products.

The certification programs listed are (1) Association certification programs, (2) third-party certification programs or (3) self-certification programs.

Information on standards which have not yet reached the publication stage is indicated by "IP" (in process) and appears under the column "Latest Issue or Status of Standard." Tentative standards are indicated by "T" in the same column, after the date. Within the tables the numbers listed under the heading "Product Number" are those used by NEISS. An asterisk (*) preceding a number means that the number was assigned as a retrieval designation by Standards Information Services in the absence of an official number assigned by the issuing organization. The letters listed under "Type of Standard" are keyed as follows:

O=Other
P=Performance
S=Safety
TM=Test Method

The tabulation is expected to be of use to standards-writing organizations, Federal and State government agencies, distribution and retail groups, labor unions and trade associations, consumer organizations, and individual consumers. It is hoped that the information contained in this tabulation will indicate those product areas where standards are needed, reflect possible duplication of effort by the standards-writing organizations, and provide an impetus for coordination of standardization activities.

Standards Information Services will continue to keep abreast of standards development and publication, and, as sufficient changes occur to so warrant, new editions of this tabulation will be published. Users are invited to make comments or provide information which can be considered for incorporation in the next edition, so that it will more completely define the status of consumer product standards. There is a particular need for information on standards in the process of development since the only way to obtain this information is directly from the Association involved. Send comments to Standards Information Services, National Bureau of Standards, Technology Building, Room B162, Washington, D.C. 20234.

4.2. PRODUCT INDEX INCLUDING SIC NUMBERS

The applicable Standard Industrial Classification (SIC) number(s) immediately follow(s) the product entry in parentheses. There are some instances when a SIC number could not be assigned. The assignment of the SIC number(s) was based only on the first product listed in the entry and all words describing that product; for example:

Animals, toy, and dolls, mechanical, including key wind and battery operated (3944)
Bedspreads (2211, 2392)
Cleaning and Sanitizing Compounds, solvent-based (2841, 2842)
Fondue Pots and Chafing Dishes with open flame burners
Windshield Wiper Fluid (2899)

When more than one SIC number is provided, each number should be checked and identified before being used for statistical purposes since the SIC number(s) can refer to (1) different materials, (2) products made from purchased materials transferred from another establishment, (3) products made in the same establishment as the basic materials, or (4) separate parts of products. In the latter case, the numbers are separated by "and;" for example: Garage doors, with automatic door opener and closer (2431, 3442, and 3699) (2431, 3442 refer to the garage door and 3699 refers to the automatic door opener and closer).

16. ABSTRACT *(A 200-word or less factual summary of most significant information. If document includes a significant bibliography or literature survey, mention it here.)* This tabulation is a revised and enlarged version of NBS Technical Note 762, "Tabulation of Voluntary Standards and Certification Programs for Consumer Products," issued March 1973.

The original draft of the tabulation was developed by the Council of the American National Standards Institute (ANSI) in 1970. The product categories covered in the ANSI tabulation were based on those listed in the Consumer Product Safety Index (CPSI) of the National Commission on Product Safety, issued in July 1970. In 1971, at the Consumer Council's request, the Bureau's Office of Engineering and Information Processing Standards revised the draft tabulation and issued it as NBS Technical Note 705. In March 1973, the tabulation was again revised based on the product categories developed for the National Electronic Injury Surveillance System (NEISS) of the Food and Drug Administration. The NEISS listings used in Technical Note 762 were an expansion and revision of the CPSI. The product categories in the current revision are based on the NEISS Coding Manual published by the Consumer Product Safety Commission in July 1975.

The tabulation lists over 1000 product areas and over 2000 standards titles covering products found in and around the home. (The major consumer product areas not included are foods, beverages, and drugs.) The tabulation also indicates the applicable national, industrial, and international standards which deal primarily with either safety or performance or both aspects of the products listed. For some of the product areas, there are no applicable standards. Available information on certification programs and standards

17. KEY WORDS *(six to twelve entries; alphabetical order; capitalize only the first letter of the first key word unless a proper name; separated by semicolons)* Certification programs; consumer products; household products; industry standards; international recommendations; national standards; product standards; recommended practices; specifications; test methods.

SINGLE CRYSTAL DATA

REVISED! UPDATED!

In 1954, the first edition of CRYSTAL DATA (Determinative Tables and Systematic Tables) was published as Memoir 60 of the Geological Society of America. In 1960, the second edition of the Determinative Tables was issued as Monograph 5 of the American Crystallographic Association, and in 1967, the Systematic Tables were issued as Monograph 6. These editions proved extremely valuable to crystallographers throughout the world. Recognizing the need for updated crystallographic information, the National Bureau of Standards Office of Standard Reference Data has sponsored the issuance of a new edition.

This, the THIRD EDITION, should be of particular interest not only to crystallographers but also to chemists, mineralogists, physicists and individuals in related fields of study. The current edition, which comprises two volumes, Organic and Inorganic, is a thoroughly revised and updated work, containing over 25,000 entries.

The entries are listed, *within each crystal system*, according to increasing values of a determinative number: a/b ratio in trimetric systems, c/a ratio in dimetric systems, and cubic cell edge a, in the isometric system. In addition, the following information is given: axial ratio(s) and interaxial angles not fixed by symmetry, cell dimensions, space group or diffraction aspect, number of formula units per unit cell, crystal structure, (whether determined), measured density and x-ray calculated density. Also listed is the name of the compound and synonym(s), chemical formula, literature reference and transformation matrix. When available, the crystal structure type, crystal habit, cleavages, twinning, color, optical properties, indices of refraction, optical orientation, melting point and transition point are also listed.

THIS EDITION culminates years of effort by J. D. H. Donnay, Johns Hopkins University, Helen M. Ondik, National Bureau of Standards, Sten Samson, California Institute of Technology, Quintin Johnson, Lawrence Radiation Laboratory, Melvin H. Mueller, Argonne National Laboratory, Gerard M. Wolten, Aerospace Corporation, Mary E. Mrose, U.S. Geological Survey, Olga Kennard and David G. Watson, Cambridge University, England and Murray Vernon King, Massachusetts General Hospital.

DIMENSIONS/NBS (formerly Technical News Bulletin)—This monthly magazine is published to inform scientists, engineers, businessmen, industry, teachers, students, and consumers of the latest advances in science and technology, with primary emphasis on the work at NBS. The magazine highlights and reviews such issues as energy research, fire protection, building technology, metric conversion, pollution abatement, health and safety, and consumer product performance. In addition, it reports the results of Bureau programs in measurement standards and techniques, properties of matter and materials, engineering standards and services, instrumentation, and automatic data processing.

Annual subscription: Domestic, $12.50; Foreign, $15.65.

NONPERIODICALS

Monographs—Major contributions to the technical literature on various subjects related to the Bureau's scientific and technical activities.

Handbooks—Recommended codes of engineering and industrial practice (including safety codes) developed in cooperation with interested industries, professional organizations, and regulatory bodies.

Special Publications—Include proceedings of conferences sponsored by NBS, NBS annual reports, and other special publications appropriate to this grouping such as wall charts, pocket cards, and bibliographies.

Applied Mathematics Series—Mathematical tables, manuals, and studies of special interest to physicists, engineers, chemists, biologists, mathematicians, computer programmers, and others engaged in scientific and technical work.

National Standard Reference Data Series—Provides quantitative data on the physical and chemical properties of materials, compiled from the world's literature and critically evaluated. Developed under a world-wide program coordinated by NBS. Program under authority of National Standard Data Act (Public Law 90-396).

NOTE: At present the principal publication outlet for these data is the Journal of Physical and Chemical Reference Data (JPCRD) published quarterly for NBS by the American Chemical Society (ACS) and the American Institute of Physics (AIP). Subscriptions, reprints, and supplements available from ACS, 1155 Sixteenth St. N.W., Wash. D. C. 20056.

Building Science Series—Disseminates technical information developed at the Bureau on building materials, components, systems, and whole structures. The series presents research results, test methods, and performance criteria related to the structural and environmental functions and the durability and safety characteristics of building elements and systems.

Technical Notes—Studies or reports which are complete in themselves but restrictive in their treatment of a subject. Analogous to monographs but not so comprehensive in scope or definitive in treatment of the subject area. Often serve as a vehicle for final reports of work performed at NBS under the sponsorship of other government agencies.

Voluntary Product Standards—Developed under procedures published by the Department of Commerce in Part 10, Title 15, of the Code of Federal Regulations. The purpose of the standards is to establish nationally recognized requirements for products, and to provide all concerned interests with a basis for common understanding of the characteristics of the products. NBS administers this program as a supplement to the activities of the private sector standardizing organizations.

Consumer Information Series—Practical information, based on NBS research and experience, covering areas of interest to the consumer. Easily understandable language and illustrations provide useful background knowledge for shopping in today's technological marketplace.

Order **above** *NBS publications from: Superintendent of Documents, Government Printing Office, Washington, D.C. 20402.*

Order **following** *NBS publications—NBSIR's and FIPS from the National Technical Information Services, Springfield, Va. 22161.*
